

Release Notes

AvantGo® Pylon Application Server and Application Server Client

Version 5.2

Server Build: 272

Client Build, Palm OS: 204

Client Build, Pocket PC: 199

July 2003

1. Current build

- 1.1 This document covers information about installing and syncing AvantGo Pylon Application Server, Version 5.2 and AvantGo Pylon Application Server Client, Version 5.2 that other published documentation does not cover.
- 1.2 This document describes:
 - AvantGo Pylon Application Server build 272
 - AvantGo Pylon Application Server Client for Palm OS build 204
 - AvantGo Pylon Application Server Client for Pocket PC build 199

2. Known issues

- 2.1 During an install on Windows NT4 with Service Pack 6a, the following error message may appear:

"Lotus Notes not Properly Installed - An error occurred trying to access the pylon install libraries. Please make sure Lotus Notes is installed properly and try again."

To solve, replace the existing mfc42.dll with a new version (e.g., version 6.0.8447) and re-run the Pylon Application Server installer.
- 2.2 AvantGo does not support the installation of Pylon Application Server on a Domino Server running only the Mail Server.

3. Support for Tungsten W with Palm OS 5

- 3.1 The 5.2.1 release supports the Tungsten W device with Palm OS 5.
- 3.2 Configuring Tungsten W devices
Use the information below, in conjunction with the referenced sections of the Pylon 5.2 *Client Setup Guide*, in order to configure a Tungsten W device:

Under the "Configuring your Palm OS device" sub-heading within either:
- http://avantgo.com/doc/pylon/client_guide/Ch3SettingUpDevices7.html
- <http://www.avantgo.com/doc/pylon/ClientSetupGuide.pdf> - page 39

For Tungsten W devices, the user should only complete steps 7 thru 15. After completing step 15, the user needs to initiate a Hotsync with the Pylon Application Server to install PylonSync on the mobile device. For this first sync, the user will always receive a login error message because PylonSync has not yet been configured. After the user has completed this first HotSync, user should then complete steps 1 thru 4 in the "Configuring PylonSync on the device" sub-heading within either:
- http://avantgo.com/doc/pylon/client_guide/Ch3SettingUpDevices8.html
- <http://www.avantgo.com/doc/pylon/ClientSetupGuide.pdf> - page 46

After completing these steps, the Tungsten W user will be able to sync using PylonSync.

4. Support and documentation

4.1 Contact technical support at pylon_support@avantgo.com.

4.2 Access documentation from <http://www.avantgo.com/doc>.

4.3 Access product FAQs from http://www.avantgo.com/support/pylon_support/faq.
